

An Introduction to Dynamic Support Systems and a message from the CEO - Patrick Wildblood

Products and Services

- Hydraulic Snubbers
- Rigid Struts
- Dynamic Pipe Clamps
- Structural Attachments
- Calibrated test facility
- Site Surveys
- Bespoke Designs
- FEA Design

With the addition of a new range of hydraulic snubbers, we at DSS felt it was time we engaged more regularly with our industry colleagues. Our aim is to keep the people within the industry informed of the exciting innovative development which is in progress at our company.

Having completed contracts on a worldwide basis, gained approvals and registrations with recognised major industry operators the level of progress has been an exciting time for our company.

The introduction of the new DS range of units can only accelerate our presence in the Hydraulic Snubber market.

Dynamic Supports Systems - Test Facility

All our snubbers are fully tested on our automated, computer controlled and calibrated test equipment. All Snubbers are entered into a master register and allocated a DSS serial number should future reference be required.

Our in-house FEA facility can be utilized to confirm the integrity of bespoke designs to meet specific customer requirements.

In-house FEA Design Facility

Manufactured Snubber Assembly
